-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 27 June 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

DETAILED ACTION

New Start Date

Due to the discussion in the phone interview, a New Start Date has been granted.

Response to Arguments

1. Applicant's arguments with respect to claims 1-32 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Dziesietnik et al. (Dziesietnik) (US 6,256,108).

Dziesietnik either explicitly or inherently teaches all of the limitations of claims 1-32 as evidenced by the fact that Dziesietnik discloses a variable data printing system and method in which many pages are generated, where each page is defined as a sequence of applications of a label to a page. Variable data Job (varJob) is made out of variable data pages (varPages). VarPages are composed by merging pregenerated labels (elements or components). Labels are color separated and encoded. Labels are preprocessed as soon as they become available. Presumably

many labels are generated once and applied many times, albeit at different positions in the page. A label preprocessor processes labels after their submission to the job by cutting them into swaths and creating auxiliary information for further planning and scheduling purposes. A page planner analyzes the page composition, estimates times and bandwidth requirements, and prepares a page composition descriptor (PCDesc) that specifies the way the page is composed. A page composer takes in a PCDesc and the necessary preprocessed labels and composes the page. The resulting page is again color separated and encoded. The page store contains the variable information, page elements, and layout descriptions. Because the page elements and layout descriptions are only referenced in the variable data stream, they must be accessed and cached locally to optimize performance. The page element store, which in a non-personalization system contains only full-page raster data, contains rasterized page elements during a personalized job. The personalization module does not send elements to the RIPs twice. (Please note: col 5, line 23 – col 11, line 5).
